## **ISIS Receives Mainpro M-1 Accreditation from College of Family Physicians Canada (CFPC)**

*New Web-Based Insulin Simulation Now Approved for Physician Credit*

**Victoria, B.C., December 18, 2009** — Simation is pleased to announce that ISIS, the Insulin Simulation Instructional System, has received formal approval from the College of Family Physicians Canada (CFPC) for up to 16 Mainpro-M1 credits. Members of the American Academy of Family Physicians are eligible to receive 16 Prescribed credits for participation in this activity due to the reciprocal agreement with the College of Family Physicians of Canada.

ISIS is an educational tool that will empower front-line physicians while improving the care their diabetic patients receive. Learners can assess their own abilities while working through various lifelike cases in their own time, at their own pace and be connected with other learners to share their thoughts and experiences.

ISIS brings incredible realism to online training. Through the active learning simulation, ISIS physicians will be taught how to better manage their diabetic patients. Using ISIS they will become better practiced at treating diabetics, ultimately referring fewer patients to specialists. A wide range of medical doctors and nurses who need to work with diabetics in their day to day activities will also be able to access the program.

ISIS is scheduled to be released in the first quarter of 2010 and will be available through [www.ManageYourInsulin.com](http://www.ManageYourInsulin.com).
